Premium Poultry Net Kit Setup Instructions

Please read these instructions fully before commencing your installation.

Premium Poultry Kits include the following:-

- 1x 25m x 105cm (209140) or 50m x 105cm (209150) Green Poultry Net complete with attached posts.
- 1x Live Access Gate.
- 1x Mains/Battery Dual Powered Fence Energiser.
- 1x 25m Energiser to Fence Lead-Out Cable.
- 1x 5m Energiser to Ground Lead.
- 1x 1m Grounding Rod.
- 1x Warning Sign.
- 4x 50mm x 1200mm Wooden Posts.
- 20x Cable Ties 530mm x 9mm.
- 25x Ring Insulators.

Note: The energiser may also include an extra short 'energiser to fence' lead and a short 'energiser to ground' lead; these can be used if the energiser is placed right next to the fence, otherwise use the 25m lead out cable provided.

1. Decide on the position of your enclosure. It is **not** essential that the two ends of your fence meet (if one side of a square enclosure is formed by a permanent fence for example) but it does help to even out the voltage on your fence. If your net is longer than you need then simply double it back against itself. Do not leave the 'spare' length lying on the ground or leaning against a building or tree etc. as this will short your fence to earth. Push the spikes at the base of the posts into firm ground and keeping enough tension in the fence to keep it standing vertically.
2. At the corners or ends of a straight run drive a wooden post into the ground 15cm centres from the plastic post with the net taugth. Now screw 2x Ring Insulators into the wooden post approx 40cm and 80cm from the ground. Using 2x 53cm cable ties wrap around the wooden post and through the Ring Insulators and tighten ensuring that the plastic corner posts and the wooden posts are a minimum of 10cm away. Repeat this at all ends and corners.
3. The energiser is supplied with 25 metres of Lead-Out Cable. If you are connecting your energiser to the mains install the energiser indoors or under cover within 25m of your poultry netting and use the 25m lead to connect it to your fence. Insert the 1m Ground Rod in the ground outside in damp soil within 5m of the energiser and connect the energiser to it using the 5m green and yellow Earth Lead. If using a 12v battery place your energiser outside the enclosure on the ground next to the fence and use the connecting leads supplied with the energiser. Push the grounding rod into the ground near to the energiser so that enough remains above ground to connect the energiser earth lead. Attach the other end of the 'energiser to ground' lead to the black earth terminal of the energiser and attach the 'energiser to fence' cable to the top of the net where the horizontal lines bunch together using the rope connector supplied.
4. Your kit also includes an access gate. This is a new design of gate that allows you to access your enclosure without switching off the energiser. Attach the connectors on the gate to the connectors on the main net. Instructions for using the new Hotline gate are included with your kit.

- For spare plastic posts order part no. 18414.
- For extra gates order part no. PGS-1.
- For additional nets order part no. 18006GR for 25m and 18018GR for 50m.
- For suitable batteries please use F1C1 or L75.
- For replacement cable ties order part no. 17504.
- For extra wooden posts order part no. WP120050.
